58. Number and Percent of Year-Round Housing Units by Air Conditioning Status, by County, Mississippi, 1980. 138

Introduction

This is the fifth edition of Mississippi Counties to be published by the Department of Sociology, Mississippi Agricultural and Forestry Experiment Station. The first two editions were devoted mainly to data from the 1950 census, the third and fourth editions to data from the 1960 and 1970 censuses. Most of the data in the present volume are derived from the 1980 census.

Selection of data for inclusion has been influenced by both the availability of data and by the kinds of data which are often requested of the Department of Sociology, particularly data related to specific counties here in the state of Mississippi. Some of the data presented were compiled from advance and preliminary reports which have been utilized so as to make the data available as soon as possible. Because more definitive data may be released at unknown future dates, small differences may appear between the data presented herein and some which may eventually be released by the Census Bureau. Furthermore some kinds of data which have appeared in earlier editions of Mississippi Counties are not included in this edition because the data either have not been released or were released too late for inclusion. Thus, coverage has been sacrificed, to a degree, in favor of timeliness. Some data have been included, however, which do not appear in earlier editions.

Definitions of Major Terms

Throughout this volume a number of more or less common terms and rates will be used within the various tables presented. In the interest of clarity and standardized interpretation, many of the terms and rates used are defined below, using excerpts from the General Population Characteristics volume and the General Social and Economic Characteristics volume of the 1980 Census of Population. These volumes should be consulted if additional detail is desired.

Race. "The concept of race as used by the Census Bureau reflects self-identification by respondents, it does not denote any clear-cut scientific definition of biological stock. Since the 1980 census obtained information on race through self-identification, the data represent self-classification by people according to the race with which they identify."

"The category 'White' includes persons who indicated their race as 'White,' as well as persons who did not identify themselves in one of the specific race categories listed on the questionnaire but entered a response such as Canadian, German, Italian, Lebanese or Polish."

The category "Nonwhite" includes persons who were classified as Black according to the definition above plus those who were classified as being of other races, such as Asians and American Indians.

"The category 'Black' includes persons who indicated their race as Black or Negro, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but reported entries such as Jamaican, Black Puerto Rican, West Indian, Haitian, or Nigerian."

Spanish Origin. "Persons of Spanish origin or descent are those who classified themselves in one of the specific Spanish origin categories listed on the census questionnaire--Mexican, Puerto Rican or Cuban—as well as those who indicated that they were of other Spanish/Hispanic origin. Persons who reported 'other Spanish/Hispanic' origin are those whose origins are from Spain or the Spanish speaking countries of Central or South America, or they are Spanish origin persons identifying themselves generally as Spanish, Spanish American, Hispano, Latino, etc. Persons of Spanish origin may be of any race." Thus, the sum of white persons plus black persons plus persons of Spanish origin does not necessarily equal the total number of persons, and is often greater.

Marital Status. "The marital status classification refers to the status at the time of enumeration. Persons classified as 'Now married' include those who have been married only once and have never been widowed or divorced and those currently married persons who remarried after having been widowed or divorced. Persons reported as separated are those living apart because of marital discord, with or without a legal separation. Persons in common-law marriages are classified as now married, and all persons under 15 years old are classified as never married. All persons classified as never married are shown as 'single'." The tables on marital status are for the population 15 or more years old.

Household and Housing Unit. "A household includes all persons who occupy a housing unit. A housing unit is a house, an apartment, a group of rooms, or a single room occupied as a separate living quarters, or if vacant, intended for occupancy as a separate living quarters. Separate living quarters are those in which the occupants live and eat separately from other persons in the building and have direct access from the outside of the building or through a common hall."

Householder. "One person in each household is designated as the 'householder'. In most cases, this is the person, or one of the persons, in whose name the home is owned or rented. A family householder is a householder living with one or more persons related to him or her by birth, marriage or adoption. A nonfamily householder is a householder living alone or with nonrelatives only."

Family. "A family consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage or adoption; all persons in a household who are related to the householder are regarded as members of his or her family. A 'married couple family' is a family in which the householder and spouse are enumerated as members of the same household. Not all households contain families because a household may be composed of a group of unrelated persons or one person living alone."

Urban and Rural Residence. "As defined in the 1980 census, the urban population comprises all persons living in urbanized areas and in places of 2,500 or more inhabitants outside urbanized areas. More specifically, the urban population consists of all persons living in (1) places of 2,500 or more inhabitants, incorporated as cities, villages, and towns but excluding those persons living in the rural portions of extended cities; (2) census designated places of 2,500 or more inhabitants; and (3) other territory incorporated or non-incorporated, included in urbanized areas. The population not classified as urban constitutes the rural population. Urbanized areas comprise an incorporated place and adjacent densely settled surrounding area that together have a minimum population of 50,000."

Employed. "Employed persons include all civilians 16 years old and over who were either (a) 'at work'--those who did any work at all during the reference week as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid worker on a family farm or in a family business or (b) 'with a job but not at work'--those who did not work during the reference week but had jobs or businesses from which they were temporarily absent."

Unemployed. "Persons are classified as unemployed if they were civilians 16 years old and over and (a) were neither 'at work' nor 'with a job but not at work' during the reference week, (b) were looking for work during the last 4 weeks, and (c) were available to accept a job. Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off."

Civilian Labor Force. "The civilian labor force consists of all persons classified as employed or unemployed in accordance with the criteria described above."

Labor Force. "The labor force includes all persons classified in the civilian labor force plus members of the Armed Forces on active duty."

The following notes concerning characteristics of housing were abstracted from the Summary Characteristics for Governmental Units and Standard Metropolitan Statistical Areas volume of the 1980 Census of Population and Housing.

Lacking Complete Plumbing. "A housing unit is classified as 'lacking complete plumbing for exclusive use' when (1) all three specified plumbing facilities (hot and cold piped water, a flush toilet, and a bathtub or shower) are present inside the unit, but are also used by another household; (2) some, but not all the facilities are present; or (3) none of the three specified plumbing facilities is present."

Bathrooms. "A complete bathroom is a bathroom with a flush toilet, bathtub or shower and a wash basin with piped hot and cold water for the exclusive use of the occupants of the housing unit. A half bathroom has at least a flush toilet or a bathtub or shower for exclusive use, but does not have all the facilities for a complete bathroom. The equipment must be inside the unit being enumerated."

Complete Kitchen Facilities. "A housing unit has complete kitchen facilities when it has the following: (1) an installed sink with piped water, (2) a range or cookstove, and (3) a mechanical refrigerator. All kitchen facilities must be located in the structure. They need not be in the same room. Quarters with only portable cooking equipment are not considered as having a range or cookstove. An ice box is not included as a mechanical refrigerator."

Poverty Threshold. "Families and unrelated individuals are classified as being below or above the poverty level based on income in 1979 using a poverty index which provides a range of income cutoffs or 'poverty thresholds' varying by size of family, number of children and age of the family householder or unrelated individual... . The income cutoffs are updated each year to reflect the change in the Consumer Price Index."

Weighted Average Poverty Thresholds: 1979

Size of Family	Threshold
1 person:	
Under 65 years	$ 3,774
65 years and over	3,479
2 persons:	
Householder under 65 years	4,876
Householder 65 years and over	4,389
3 persons	5,787
4 persons	7,412
5 persons	8,776
6 persons	9,915
7 persons	11,237
8 persons	12,484
9 or more persons	14,812

For additional detail concerning the poverty level consult U.S. Census of Population and Housing, Advance Estimates of Social Economic, and Housing Characteristics, Mississippi, Appendix B (from which the above is quoted) or Current Population Reports, Characteristics of the Population Below the Poverty Level, 1980, (Series P-60, No. 133).

Definitions of Rates

The definitions of birth rate, death rate, natural increase, net migration and the sex ratio, being standard demographic definitions, are thus supplied by the authors.

Natural Increase. The number of births less the number of deaths.

Net Migration. The number of persons moving into the state, less the number of persons moving out of the state.

Natural increase and net migration determine the size of the population. For example, the 1980 population of Mississippi (2,520,638) is equal to the 1970 population (2,216,994) plus natural increase (220,543) plus net migration (83,101), for the 1970-1980 period.

Sex Ratio. The number of males divided by the number of females and multiplied by 100. The result is the number of males per 100 females.

Birth Rate. The number of live births occurring during a year's time divided by the mid-year population for that year and multiplied by one thousand. The result is the number of births per thousand inhabitants.

Death Rate. The number of deaths occurring during a year's time divided by the mid-year population for that year and multiplied by one thousand. The result is the number of deaths per thousand inhabitants.
